Koantenn

Overdrive / Resonant Filter

Koantenn is a versatile overdrive/Resonant (LowPass/HighPass) Filter pedal with cv input. It offers a dedicated overdrive in front of the filter. The input signal is not overdriving the input of filter, the signal gets overdriven and then, it is going gently into the filter, so its not sounding like the well known "filter overdrive" sound, but more like a polished and controllable overdrive followed by clean filter. The filter's cutoff is cv controllable at the 3,5 jack input, this input is also compatible with the use of an expression pedal.

- All analog Overdrive / filter
- Low Pass High Pass Resonant Filter
- CV input / Expression pedal input
- High end components (Nichicon caps, Alpha pots and Switch, Rean Jacks...)
- Made in France
- True Bypass
- 9V/12V input power supply negative tip
- Stupid Breton name

Gounid : Gain
Frekañs : Filter Cutoff Frequency
Dasson : Filter Resonance
Amplèd : Volume
Tip : High Pass / Low Pass Filter switch
Jack 3,5 : Stereo Jack for CV input or expression pedal with a stereo 3,5 to 2 X 6,35 jacks adapter (not provided)
Power : 9V/12V DC, negative tip / 25mA
